Profile Summary

Self-taught **Full Stack Developer** with hands-on experience building scalable, production-ready web applications from frontend to backend. Proficient in **React**, **Django**, **Django REST Framework (DRF)**, **FastAPI**, **Python**, and **PostgreSQL**, with strong exposure to clean architecture, RESTful API design, authentication flows, real-time systems, and payment integrations. Skilled in building AI-powered platforms, real-time user workflows, and end-to-end project development. Experienced in deploying cloud-native applications on **AWS** using Docker. Solid foundation in **Data Structures** and end-to-end system design.

Skills

Languages	JavaScript, Python
Frontend	React, HTML5, Tailwind CSS, Bootstrap, Zustand, Redux Toolkit
Backend	Django, Django REST Framework (DRF), REST APIs, FastAPI, Authentication, JWT
Databases & Storage	MongoDB, PostgreSQL, Cloudinary, AWS S3, Firebase, Supabase
Database Concepts	Indexing, Aggregation Pipelines, Transactions, Schema Design
API & Security	RESTful Design, Access & Refresh Tokens, Webhooks
Integrations & Real-Time	Socket.IO, Razorpay, Stripe, Google OAuth, Facebook OAuth
Cloud & DevOps	AWS EC2, NGINX, Docker, GitHub Actions, Render, Vercel
Testing	Django Test Framework, DRF APITestCase, API Testing (Postman)
Core Concepts	Authentication Flows, Role-Based Access Control, Pagination, Rate Limiting, Caching Basics, Error Handling, Debugging
Architecture	Repository Pattern, MVT, SOLID, OOP
Familiar with	AI Integrations, n8n
Version Control	Git, GitHub

Professional Projects

Intraview — AI Mock Interview & Skill Assessment Platform Live — GitHub

A full-stack mock interview platform connecting candidates with expert interviewers, featuring a token-based booking economy, AI-powered interviews, and real-time video sessions.

- Built a full-stack platform using **React.js (Vite)**, **Django REST Framework**, **PostgreSQL**, **Redis**, and **Celery** for background task processing.
- Implemented secure authentication with OTP-based signup, JWT access/refresh tokens via HTTP-only cookies, Google OAuth, and strict role-based access control (RBAC) across candidate, interviewer, and admin roles.
- Engineered a **token-based economy** enforced with `transaction.atomic()` and row-level locking (`select_for_update()`): tokens are locked on booking, transferred on completion, and refunded on cancellation.
- Integrated **Stripe Checkout** with webhook routing for token pack purchases and tiered subscription plans (Free / Starter / Pro) for both candidates and interviewers.
- Developed **AI-powered mock interviews** using LiveKit (WebRTC infrastructure), Tavus AI avatars, and Google Gemini models for per-question evaluation and final session report generation (Gemini Flash + Gemini Pro pipeline).
- Built a distributed **LiveKit agent** with custom runtime state management, turn management, runtime ownership leasing, and reconnect grace handling to ensure fault-tolerant AI interview sessions.
- Implemented **real-time P2P video sessions** for human interviews using ZEGOCLOUD and live unread notification counts via Django Channels WebSockets.
- Designed a multi-role availability and booking system with slot-level capacity enforcement, rescheduling workflows, and automated token refunds on cancellation.

- Containerized all services (Django, PostgreSQL, Redis, Celery workers, Celery Beat) with **Docker Compose** and configured CI/CD pipelines via GitHub Actions.

Jamilah — E-Commerce Platform Live — GitHub

Designed and developed a production-ready e-commerce platform enabling secure online shopping, payment processing, and efficient order management.

- Built the application using Django, Python, and PostgreSQL following the MVT (Model-View-Template) architecture with server-side rendering.
- Implemented core e-commerce functionalities including product catalog, category filtering, shopping cart, wishlist, coupon system, checkout, and order tracking.
- Integrated Razorpay payment gateway for secure payment processing, transaction verification, and automated order management.
- Developed user account features such as authentication, profile management, address management, wallet functionality, and order history.
- Created an administrative dashboard for managing products, inventory, orders, customers, offers, and sales operations.
- Deployed the application on AWS with production-ready configurations to ensure reliability, scalability, and seamless user experience.

Mini Projects

AI Story Generator API Live — GitHub

A Python-based REST API built with FastAPI for creating and managing fictional characters and generating AI-powered stories. Integrated Supabase for database operations and Gemini API for contextual story generation, with structured validation, error handling, and modular backend architecture.

Education

Brocamp (Brototype) — Python FUll Stack Stack Development *2024 – Present*

Bachelor of English Literature (BA English) *2021 – 2024*
University of Kerala, Thiruvananthapuram
